## 1 Problems on Random Variables

Exercise 1.1 The following table gives the proportion of credit hours that earned grades $F, D, C, B$ and $A$ in KU:

| grade | $A$ | $B$ | $C$ | $D$ | $F$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| proportion | .15 | .35 | .30 | .15 | .05 |

Let $X$ represent the points earned for grades $A, B, C, D$ and $F$. Write down the probability distribution of $X$ and compute the mean (or the expected value $E(X)$ ) and the standard deviation.

Solution: We have $X=0,1,2,3,4$ respectively, when the grades are $F, D, C, B, A$. Therefore, the distribution of $X$ is given by

| $x$ | 0 | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $p(x)=P(X=x)$ | .05 | .15 | .30 | .35 | .15 |

Now, the mean $\mu$ is given by

$$
\mu=\sum x_{i} p\left(x_{i}\right)=0 * .05+1 * .15+2 * .30+3 * .35+4 * .15=2.4
$$

The variance $\sigma^{2}=$
$\sum x_{i}^{2} p\left(x_{i}\right)-m u^{2}=0^{2} * .05+1^{2} * .15+2^{2} * .30+3^{2} * .35+4^{2} * .15-(2.4)^{2}=1.14$

The square root of the variance is the standard deviation. So, the standard deviation

$$
\sigma=\sqrt{1.14}=1.0677
$$

Exercise 1.2 Maria's daily income X (in dollars) has the following distribution.

| $X=x$ | 0 | 100 | 120 | 130 | 140 | 150 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $p(x)$ | .14 | 0.27 | 0.27 | 0.18 | 0.09 | 0.05 |

What is Maria's expected daily income and the standard deviation?

Exercise 1.3 The number $X$ of typos in a website has the following probability distribution.

| $X=x$ | 0 | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $p(x)$ | 0.24 | 0.31 | 0.23 | 0.14 | 0.07 | 0.01 |

What is the expected number of typos in a website?

Exercise 1.4 A Van pool can carry 7 people. Following is the distribution of number of riders in the van on a given day.

| number of | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| probability | 0 | .12 | .22 | .23 | .28 | .08 | .07 |

Let $X$ be the number of passenger on a day. Find the expected value $E(X)$ (or mean) and the standard deviation of $X$.

Exercise 1.5 Let $X$ represent the hourly wages (in whole dollars) earned by workers in an industry. Following is the distribution of $X$,

| $x$ (wages) | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $p(x)$ | .04 | .06 | .07 | .09 | .11 | .12 | .14 | .11 | .09 | .08 | .04 | .03 | .01 | .01 |

Find the expected value $E(X)$ (or mean) and the standard deviation of $X$.

Exercise 1.6 In a school district, let $X$ represents the number of students in a class. The following is the distribution of $X$.

| number | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| prob | .03 | .04 | .06 | .07 | .10 | .12 | .13 | .11 | .09 | .07 | .06 | .04 | .03 | .02 | .02 | .01 |

1. What is the probability that $X$ is at least 20 ?

$$
\text { Answer }=P(\text { at least } 20)=.03+.02+.02+.01=.08
$$

2. Find the expected value $E(X)$ (or mean) and the standard deviation of $X$.
3. Find the variance $\sigma^{2}$ of X .
4. Find the standard deviation $\sigma$ of X .
